An NC Vein Treatment Center on the Dangers of DVT

Meta Description less than 156 characters (Summary)

The team of experts at an NC vein treatment center publishes an exclusive interview on the potential threats of DVT

One Line Quote (Not the same as the Summary)

Critical venous conditions such as deep vein thrombosis (DVT) can pose imminent threats to your health if undiagnosed or neglected.

Body

March 13th, 2015. Winston-Salem, NC. Novant Health Vein Specialists, a leading Winston-Salem vein clinic, is announcing the publication of an exclusive interview with Dr. Ray Workman, a board-certified vascular surgeon, on deep vein thrombosis (DVT). According to the Winston-Salem based clinic, many people know very little about the critical condition of DVT, and few are fully aware of the possible threats the condition poses.

Dr. Workman explains, "DVT refers to blood clots, sometimes deep within the veins of the legs, that are usually unknown to the patient. A hidden blood clot can break free of its place in the leg and travel to the heart, lungs or brain and cause a fatal embolism." Dr. Workman goes on to explain that at his NC vein treatment center, they use painless technology such as handheld ultrasound to diagnose DVT and other venous disorders. Treatments are effective, and may include blood thinners or minimally invasive procedures that require no hospitalization.

Novant Health Vein Specialists is publishing this information in the hopes that patients at risk of DVT, including those who are overweight or obese, or those with existing varicose veins, will seek an appointment with the experts at the Winston-Salem vein clinic. For more information on this and other vein health topics and treatment options, visit the clinic's website at <http://salemveins.com>.

Varicose Vein Treatment Options

Varicose veins result from malfunction of their one-way valves which normally promote the return of blood from the extremities back to the heart. Blood backs up in the veins increasing the pressure against the vein walls resulting in bulging veins. More than just a cosmetic nuisance, however, varicose veins can lead to leg pain, swelling and discoloration.

Many people are unaware of the affordable, effective treatments available to eliminate varicose veins. Modern advances in technology have expanded treatment options to include techniques such as sclerotherapy, radiofrequency ablation and endovenous laser therapy. All of these procedures are well tolerated. They are performed by a highly skilled vein doctor on an outpatient basis with most patients able to return to work the next day.

About Novant Health Vein Specialists

Novant Health Vein Specialists is Winston-Salem, North Carolina's foremost provider of customized, state-of-the-art care for vein disorders. Their expertly trained and caring team of health professionals is dedicated to providing patients with the highest quality of vein care. The center offers advanced and minimally invasive therapies to treat a wide range of vein conditions. Dr. Ray Workman leads the medical staff. He and his 5 partners, Dr. R. Bradley Thomason, Dr. Steve Motew, Dr. Phillip Moore, Dr. Joel Deonanan, and Dr. Shawn Fleming are all board certified in vascular surgery by the American Board of Surgery. They are board certified vascular surgeons offering full service vein treatments in Winston-Salem, including sclerotherapy, ambulatory phlebectomy, endovenous ablation, venous stenting, complex venous ulcer management, and pelvic congestion syndrome.
